

## **PRESS RELEASE:**

For Immediate Release

### **“SCEIC Helps Kids Start School on the Right Track with Brain Training”**

Space Coast Early Intervention Center’s brain training program helps children in the community enjoy learning, prepare for the school year.

**Melbourne, FL - July 14, 2016** - Space Coast Early Intervention Center (SCEIC), Brevard’s premier non-profit school for children with and without special needs, is helping children in the community gain back confidence at school, improving performance and renewing an enthusiasm for learning. This dramatic change has resulted from participation in SCEIC’s Brain Training Program.

Brain training helps to uncover the root cause of the student’s struggle, allowing specialists target, modify, and develop the brain to improve function and strengthen deficiencies. One of SCEIC’s students, Katie R., recently graduated from the program with a completely different outlook on school, and grades that went from C’s and F’s, to A’s, B’s and C’s:

*“The Brain Training program has helped our daughter tremendously,”* explains Karen, Katie’s mom. *“She started out very frustrated with school, felt very much unfocused and extremely anxious. After just a month or two in the program, we started seeing a difference. Her confidence level started to improve; she started doing homework on her own. She went from telling us every day that she ‘hated’ school to feeling much happier... If your child is struggling with school, anxious, and simply can’t express what or why they can’t get it, this program is for you.”*

Space Coast Training Center Director, Sue Bryant, became a brain trainer eight years ago when she discovered her son was struggling with reading. *“My son went through the brain training program as a client, while I trained to be a trainer. Brain training absolutely changed his life for the better - and I’ve seen it happen again and again with my clients! They stand taller, are more confident, and perform better in school and life.”*

Brain training can be beneficial for children and adults, with and without learning disabilities, and is available at Space Coast Early Intervention Center for anyone over the age of 5. Assessments are available by calling 321-729-6858 x208.

#### **More About Brain Training:**

Also known as PACE (Processing and Cognitive Enhancement), brain training describes a set of revolutionary techniques developed by brain researchers and educators that test, target, and strengthen specific mental skills. A professional brain trainer reviews cognitive skills test data, uses exercises that target any skill weaknesses, then works with the individual one-on-one to produce dramatic changes in learning abilities and performance.
