# Notes for Eco Benefits and By the Numbers

Below. all Eco Benefits are listed for the collected data points throughout the city of Ottawa. These numbers are compiled using the iTree Eco tool.

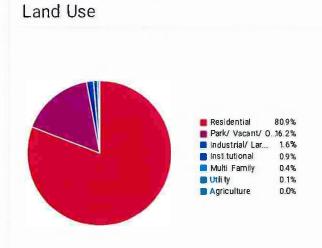

Total Eco-Benefits	
Overall Monetary Benefit:	\$65,714.00
Stormwater Monetary Benefit:	\$8,764.98
Runoff Avoided:	131123.23 (ft³)
Interception:	1323678.90 (ft <sup>3</sup> )
Air Quality Monetary Benefit:	\$29,811.30
Pollutants Removed:	11107.53 (lbs)
Carbon Monetary Benefit:	\$27,137.65
Carbon Storage:	17620452.00 (lbs)
CO <sub>2</sub> Storage:	64608212.00 (lbs)
CO <sub>2</sub> Sequestered:	1063862.90 (lbs)

Total Trees: 6,225

# **Location Charts**

### Notes for Land Use

Distribution of publicly managed trees is shown below, with Residential making up over 80% of the total recorded.

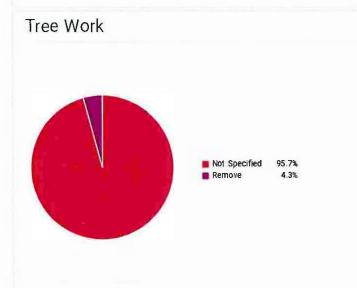

Land Use		
LAND USE	COUNT	PERCENTAGE
Residential	5,034	80.9%
Park/ Vacant/ Other	1,007	16.2%
Industrial/ Large Commercial	98	1.6%
Institutional	56	0.9%
Multi Family	24	0.4%
Utility	4	0.1%
Agriculture	2	0.0%

# Management Need Charts

### Notes for Tree Work

With over 6,000 trees recorded, only having 4.3% of the survey needing to be removed is an impressive statistic for a community of this size.

Tree Work			
TREE WORK	COUNT	PERCENTAGE	
Not Specified	5,958	95.7%	
Remove	267	4.3%	

# Tree Diversity Charts

# Notes for Most Common Species

Following the 10-20-30 rule, Ottawa only has two species exceeding the 10% recommendation. Other than the excess of Silver maple and Pin oak, there is a great representation of diversity throughout the community.

# Most Common Species

# Notes for Most Common Genus - Top 10

Following the 10-20-30 rule, Maple and Oak genus both exceed the recommended genus percentage of 20%. In the future it would be advisable to avoid planting both Genus.

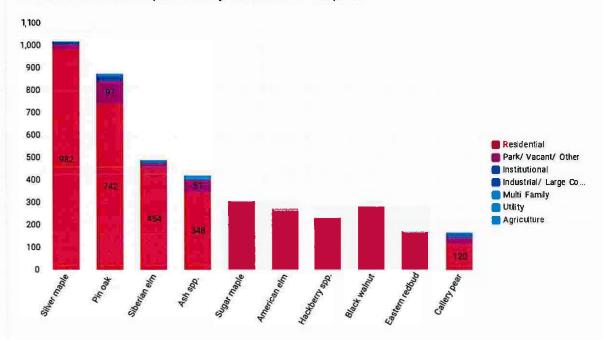

#### Most Common Genus - Top 10 29.2% A Cer Quercus 25.6% Ulmus 🔳 15.5% ■ Fraxinus 8.1% Juglans 5.4% Celtis 4.4% 3.3% Cercis 3.2% Pyrus Juniperus 2.8% Liquidambar 2.5%

Most Common Genus - Top 10		
GENUS	COUNT	PERCENTAGE
Acer	1,505	29.2%
Quercus	1,316	25.6%
Ulmus	796	15.5%
Fraxinus	418	8.1%
Juglans	279	5.4%

Pyrus	166	3.2%
Juniperus	142	2.8%
Liquidambar	127	2.5%

# Notes for Most Common Species by Landuse - Top 10

Of the top species, we can see here where the majority of each species are located in terms of planting site.

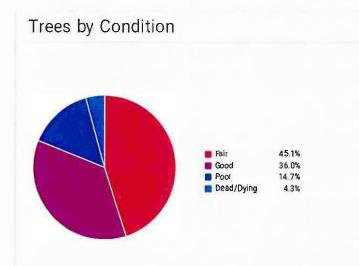

# Tree Health Charts

# Notes for Trees by Condition

Below shows the overall health of Ottawa's canopy. Efforts should be first prioritized in removal of the 267 Dead/Dying trees, followed by further investigation on the Poor trees. If they do not seem

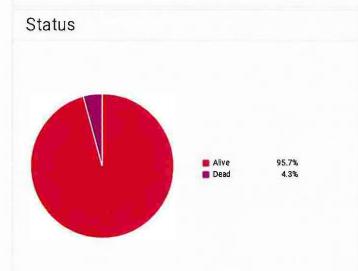

reasonable to nurse back into health, removal should be considered. Once both of these categories have been addressed, general maintenance of the Fair condition class should be underway in hopes of moving some of these trees towards the Good condition class.

Trees by Condition			
CONDITION	COUNT	PERCENTAGE	
Fair	2,807	45.1%	
Good	2,238	36.0%	
Poor	913	14.7%	
Dead/Dying	267	4.3%	

### Notes for Status

Dead trees should be prioritized for removal.

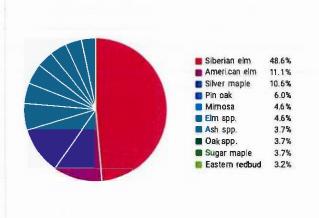

Status			
STATUS	COUNT	PERCENTAGE	
Alive	5,958	95.7%	
Dead	267	4.3%	

# Notes for Species with Most Mortality - Top 10

Below shows the species distribution of all Dead, Dying trees collected in the survey. Based on this data, almost 50% of the trees labeled for removal consist of Siberian elms.

# Species with Most Mortality - Top 10

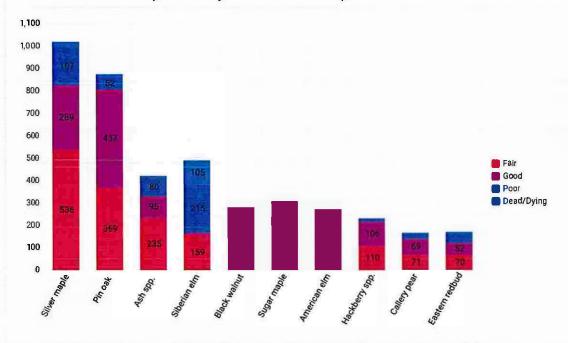

# Species with Most Mortality - Top 10

COMMON NAME	COUNT	PERCENTAGE
Siberian elm	105	48.6%
American elm	24	11.1%
Silver maple	23	10.6%
Pin oak	13	6.0%
Mimosa	10	4.6%
Elm spp.	10	4.6%
Ash spp.	8	3.7%
Oak spp.	8	3.7%
Sugar maple	8	3.7%
Eastern redbud	7	3.2%

# Notes for Most Common Species by Condition - Top 10

The top 10 species are shown below, with their condition rating addressed.

# Most Common Species by Condition - Top 10

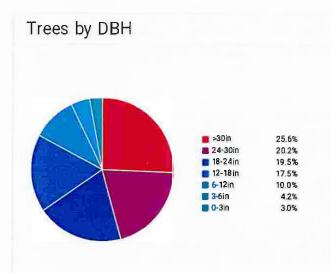

# € Size and Composition Charts

# Notes for Trees by DBH

With over 25% of ottawas canopy larger than 30" DBH, we would begin to classify this as an aging canopy. However, even though this is the case, it is better than most other communities in NE

Kansas. Under what we classify as young trees (0-6in) we only see 7.2% which is a worrisome statistic. At any given point, an ideal curve would show the number of young trees equal to if not greater than those that are considered over mature (>30"). Planting of new replacements should be prioritized in the upcoming years.

Trees by DBI	Н	
DBH RANGE	COUNT	PERCENTAGE
>30in	1,594	25.6%
24-30in	1,257	20.2%
18-24in	1,215	19.5%
12-18in	1,090	17.5%
6-12in	625	10.0%
3-6in	260	4.2%
0-3in	184	3.0%

Notes for Most Common Species by DBH Range - Top 10

Below we can get a better understanding of which trees tend to be the largest.
