*This material is based upon work supported under a grant by the Rural Development Utilities Programs FY20, United States Department of Agriculture. Golden Triangle RC&D Area Council, Inc. is an equal opportunity provider and employer. The Golden Triangle RC&D (Resource, Conservation, and Development) Council is a 501(c)(3) organization committed to natural resource conservation, community development, environmental protection, and cultural and historical preservation. The Golden Triangle RC&D currently serves 15 member counties in Southwest Georgia.

When you pour yourself a glass of water to drink, it may appear clean, taste good, and you may expect it to be safe. However,

many sources of water we assume are safe may contain dissolved minerals, organic compounds or even live organisms at harmful concentrations. The Center for Disease Control recommends that all wells be tested annually to ensure water quality.

Starting in 2021, Golden Triangle RC&D is providing a limited number of free water quality tests to low income households in Southwest Georgia.

Approved household water wells will be tested for bacteria, metals and minerals. Results of the testing are mailed to the well owner along with an explanation of the results. All results will be kept confidential.

For more information or to apply online, please call Golden Triangle RC&D at 229-995-2027 or visit our website at www.goldentrianglercd.org/watertest.

Common reasons to consider household water well testing are:

- You notice a change in your water's appearance, smell or taste
- There are known problems with well water in your area
- You have experienced problems near your well (i.e., flooding, land disturbances, and nearby waste disposal sites, areas of high agricultural impact)
- Visitors, or anyone that does not regularly use your well, experiences illness after drinking from your well

- An infant or expecting mother is using your well
- The well has not been tested on an annual basis
